

Dataset 3: Titles of Selected Studies

ABSTRACT

This dataset comprises titles, publication years, and journal sources for a curated set of studies at the intersection of data science and research impact. These studies were identified through comprehensive searches in prominent databases (SCOPUS, Web of Science) and were further refined using specific inclusion and exclusion criteria. Each selected study addresses bibliometric analysis, citation metrics, social network analysis, and machine learning applications within research impact and assessment. The dataset includes titles that explore predictive models for citation impact, knowledge transfer, open access effects on policy influence, and collaboration networks across diverse fields such as bibliometrics, artificial intelligence, and health sciences. By cataloguing these titles, this dataset serves as a foundational resource for researchers, policymakers, and institutions interested in leveraging data science tools to assess and enhance research's societal and academic impact.
